

METHODS FOR COATING SUBSTRATES

Abstract of the Disclosure

Methods are provided for coating substrates. The mixture includes a universal resin, a curing agent, a flow modifier, a colorant, and a thermochromatic compound, a phosphorescent compound, or a luminescent compound. The mixture is coated onto a substrate. Coating can be achieved by

5 mixing the mixture with a liquid form of the substrate, spraying the mixture onto the substrate, brushing the mixture onto the substrate, or submersing the substrate into the mixture.
